It may also be used as a prophylactic in many other cases of injury to the brain or spinal cord, oedema caused by trauma, haemorrhage and encephalomyelitis, or in conjunction with (coronary bypass) surgery. Treatment (which may be prophylactic) is used where ischaemic/epoxic conditions may cause cerebral hypoxia, or progressive loss of neurons due to oxygen depletion, including in patients with hypotension. The treatment reduces CIV by at least 25, particularly at least 70,%. The present sequence represents a hedgehog sequence given in the present
N-PSDB; X07274.
Increasing the survival of neuronal, dopaminergic and GABA-cells - by using a ptc therapeutic such as a protein kinass thibitor, or an agent derived from hedgehog polypeptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mouse Sonic hedgehog (Shh) protein.

Disclosure; Page 89-91; 138pp; English.
This polypeptide is mouse shh Sonic hedgehog protein. The
invention is based on the finding that hedgehog proteins are useful
as protective agents in the treatment and prophylaxis of
neurodegenerative disorders resulting from the loss of dopaminergic
and/or GABA-rergic neurons, or the general loss of tissue from the
substantia nigra. Exemplary disorders include Parkinson's disease,
Huntington's disease (both claimed), amyotrophic lateral sclerosis
and cerebral ischaemia. The invention relates to hedgehog
therapeutics (i.e. hedgehog polypeptides and gene therapy constructs
e.g. constructs encoding recombinant hedgehog gone therapy constructs
trans-activation constructs for altering hedgehog gene regulatory
sequences) and ptc therapeutics (i.e. agents which mimic the effect
of naturally occurring hedgehog proteins on patched signalling)
that are effective in both human and animal subjects. Human lih
and Dhh polypeptides (see w97763-64) are preferred. The products
can also be used for the maintenance of differentiated neurons in
cultures, and to enhance the implantation of such neuronal cells in
an animal. They can be used to prevent or treat neurodegenerative
conditions arising from the use of certain drugs, and ip the

PS Disclosure; Page 115-116; 130pp; English.

CC The present sequence is mouse Sonic hedgehog protein Shh. The

CC invention relates to a method for modulating the formation and/or

CC cells, especially muscle stem/progenitor cells, in vitro or in

CC vivo, with a hedgehog therapeutic (i.e. hedgehog polypeptides and

CC gene therapy constructs) or ptc therapeutic (i.e. a small organic

CC molecule that mimics the effect of hedgehog proteins on patched

CC signalling, or activates or potentiates patched signalling) in an

CC amount effective to alter the growth state of the treated cells.

CC of, or surgical or cosmetic repair of, such muscle tissues, by

CC administering a hedgehog polypeptide or ptc therapeutic. The

CC altrophy or cardiac muscle atrophy, in particular skeletal muscle

PS Claim 13: Pages 150-151; 210pp; English.

CC This represents a zebrafish sonic hedgehog (shh) protein sequence. The CC invention provides methods and compounds for modulating proliferation or CC differentiation of neuronal cells, cholesterol biosynthesis or transport in a cell comprises contacting a CC cholesterol biosynthesis or transport in a cell comprises contacting a CC cell with a compound that affects hedgehog, thereby affecting cholesterol biosynthesis or transport. The methods for inhibiting the neural inducing a CC cell with a compound that affects hedgehog, thereby affecting cholesterol biosynthesis or transport. The methods for inhibiting the neural inducing a critvity of a hedgehog polypeptide in cells, and for inducing pituitary CC gland gene expression utilises sequences selected from a zebrafish cc tiggy-winkle hedgehog (twhh) protein (W61487) or a mouse shh cc tiggy-winkle hedgehog (twhh) protein (W61487) or a mouse shh cc protein (W61488). The products and methods provide for compounds which can affect hedgehog activity. They can be used for treating disorders which arise from neuronal degeneration or abnormal function. They can calso be used for treating smith-Lemli-Optiz syndrome. The products can so be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

Claim 17; Page 143-45; 210pp; English.

The sequence represents a human sonic hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and is encoded by a cDNA isolated from a human fetal lung cDNA library. Probes and primers derived from the sonic hedgehog gene may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy.

Antibodies generated from the protein may be used as therapeutic or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-PSDB; Q91639.
Hedgehog-like protein(s) and nucleic acid(s) encoding them -
to treat degenerative nervous system disorder(s) and in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          misc_difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human sonic hedgehog protein.

-!- PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).	Development 120:3339-3353(1994).  -!- FUNCTION: INTERCELLULAR SIGNAL ESSENTIAL FOR A VARIETY OF -!- FUNCTION: INTERCELLULAR SIGNAL ESSENTIAL FOR A VARIETY OF PATTERNING EVENT'S DURING DEVELOPMENT. BINDS TO THE PATCHED (PTC) RECEPTOR, WHICH FUNCTIONS IN ASSOCIATION WITH SMOOTHENED (SMO), TO ACTIVATE THE TRANSCRIPTION OF TARGET GENES. INDUCES THE EXPRESSION ENDOCHONDRAL OSSIFICATION. MAY REQULATE THE BALANCE BETWEEN GROWTH AND OSSIFICATION OF THE DEVELOPING BONES. INDUCES THE EXPRESSION OF PARATHYROID HORMONE-RELATED PROTEIN (PTHRP) (BY SIMILARITY).  -!- SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).  -!- TISSUE SPECIFICITY: EXPRESSED IN EMBRYONIC LUNG, AND IN ADULT KIDNEY AND LIVER.	Marigo V., Roberts D.J., Lee S.M.K., Tsukurov O., Levi T., Marigo V., Roberts D.J., Gilbert D.J., Copeland N.G., Seidman C.E., Jenkins N.A., Seidman J.G., McMahon A.P., Tabin C.; "Cloning, expression, and chromosomal location of SHH and IHH: two human homologues of the Drosophila segment polarity gene hedgehog."; Genomics 28:44-51(1995). RE Development 120:3339-3353(1994).

C -!- FUNCTION: INTERCELLULAR SIGNAL ESSENTIAL FOR A VARIETY OF PATTERNING EVENTS DURING DEVELOPMENT: BINDS TO THE PATCHED (PTC)

C RECEPTOR, WHICH FUNCTIONS IN ASSOCIATION WITH SMOOTHENED (SMO), TO ACTIVATE THE TRANSCRIPTION OF TARGET GENES. IMPLICATED IN ENDOCHONDRAL OSSIFICATION: MAY REGULARE THE BALANCE BETWEEN GROWTH OF THE DEVELOPING BONES: INDUCES THE EXPRESSION OF PARACHYROID HORMONE-RELATED PROTEIN (PTHRP).

C -!- SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL SUBCELLULAR IN "TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SUBCACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

C -!- TISSUE SPECIFICITY: IN THE EMBRYO, DETECTED IN THE DEVELOPING GUT, THE GROWTH ZONE OF CARTILAGE OF DEVELOPING LONG BONES, EPITHELIUM CAND URGGENITAL SINUS. IN THE ADULT KIDNEY, FOUND IN PROXIMAL CONVOLUTED AND PROXIMAL STRAIGHT TUBULE.

C -!- DEVELOPMENTAL STAGE: DETECTED AT 10 DAYS POST COITUM (DPC) IN DEVELOPING GUT, AT 14.5 DAYS DPC IN THE CARTILAGE PRIMORDIUM AND IN THE DEVELOPING URGGENITAL SINUS. EXPRESSION INCREASES WITH GESTIONAL AGE IN KIDNEY AND DUODENUM, BECOMING MAXIMAL IN ADULT HOUSE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 P97812; Q61724;

ADULTHOOD.

PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOLETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY), SIMILARITY: BELONGS TO THE HEDGEHOG FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                94094334

OF PARATHYROID HORMOR-RELATED PROTEIN (PTHEP).

-!- SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL, UNFROME IS ALSO SECRETED IN ETHHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

-!- TISSUE SPECIFICITY: EXPRESSED IN DEVELOPING MIDGUT, LUNG AND CARTILAGE OF DEVELOPING LONG BONES IN THE LIMB.

-!- PTM. THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTECLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT AUTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEMLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Vortkamp

                                                                                                       PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED NOTERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES INMBOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY). SHALLARITY: BELONGS TO THE HEDGEIOG FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                             DEVELOPMENTAL STAGE: DETECTABLE WITHIN THE EARLY GASTRULA, AT STAGE 14 NEURULA, HIGH EXPRESSION IN NEUROECTODERM. EXPRESSED THROUGHOUT THE NEURAL PLATE AND SUBSEQUENTLY IN BOTH THE NERVOUS SYSTEM AND IN THE DERWATOME OF SOMITES.
INDUCTION: BY ACTIVIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY)

-!- SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

-!- TISSUE SPECIFICITY: EXPRESSED IN A NUMBER OF EMBRYONIC TISSUES INCLUDING THE NOTOCHORD, VENTRAL MEURAL TUBE, FLOOR PLATE, LUNG BUD, ZONE OF POLARIZING ACTIVITY AND POSTERIOR DISTAL MESENCHYME OF LIMBS. IN THE ADULT, EXPRESSED IN LUNG AND NEURAL RETINA.

-!- DEVELOPMENTAL STAGE: FIRST DETECTABLE DURING GASTRULATION.

-!- INDUCTION: BY RETINOLD ACTIVITY. BOTH ACTIVITIES RESULT IN ADD A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CHAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE CALBURANT OF THE CONTROL OF THE CON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hall T.M.T., Porter J.A., Beachy P.A., Leahy D.J.;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      OF TARGET GENES. IN THE ABSENCE OF SHH, PTC REPRESSES THE CONSTITUTIVE SIGNALING ACTIVITY OF SMO. ALSO REGULATES ANOTHER TARGET, THE GLI ONCCENE. INTERCELLULAR SIGNAL ESSENTIAL FOR A VARIETY OF PATTERNING EVENTS DURING DEVELOPMENT: SIGNAL FOR A UNITED THAT INDUCES VENTRAL CELL FATE IN THE NEURAL TUBE BY THE NOTOCHORD THAT INDUCES VENTRAL CELL FATE IN THE NEURAL TUBE AND SOMITES, AND THE POLARIZING SIGNAL FOR PATTERNING OF THE ANTERIOR-POSTERIOR ANIS OF THE DEVELOPING LIMB BUD. DISPLAYS BOTH FLOOR PLATE-AND MOTOR NEURON-INDUCTING ACTIVITY. THE THRESHOLD CONCENTRATION OF N-PRODUCT REQUIRED FOR MOTOR NEURON INDUCTION IS 5-FOLD LOWER THAN THAT REQUIRED FOR FLOOR PLATE INDUCTION (BY

-I. FUNCTION: INTERCELLULAR SIGNAL ESSENTIAL FOR A VARIETY OF PATTERNING EVENTS DURING DEVELOPMENT. SIGNAL PRODUCED BY THE NOTOCHORD THAT INDUCES SOMITE PATTERNING, DORSO-VENTRAL PATTERNING OF THE BRAIN AND EARLY PATTERNING OF THE DEVELOPING EYES. DISPLAYS FLOOR PLATE-INDUCING ACTIVITY. BINDS TO THE PATCHENED (PTC) RECEPTOR, WHICH FUNCTIONS IN ASSOCIATION WITH SMOOTHENED (DORSO), TO ACTIVATE THE TRANSCRIPTION OF TARGET GENES. IN THE ABSENCE OF SH, PTC REPRESSES THE CONSTITUTIVE SIGNALING ACTIVITY OF SMO (BY
                                                                                                                                                                                                                                                                                                        -I- SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL SURFACE: A "TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE: IS ALSO SECRETED IN EITHER CLEAVED ON UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

-I- TISSUE SPECIFICITY: EXPRESSED IN THE VENTRAL MIDLINE OF THE NEURAL TUBE AND BRAIN. ALSO FOUND IN THE VOTOCHORD AND IN DEVELOPING FIN BUD. IN THE DEVELOPING BRAIN. EXPRESSION OCCURS IN DOMAINS THAT INCLUDE A DISCRETE REGION IN THE FLOOR OF THE DIENCEPHALON.

-I- DEVELOPMENTAL STAGE: FIRST DETECTABLE IN THE INER CELL LAYER OF THE EMBRYONIC SHIELD DURING GASTRULATION. BY 9.5 HRS OF DEVELOPMENT, EXPRESSED IN A CONTINUOUS BAND THAT EXTENDS FROM THE PRESUMPTIVE MIDBAIN.

PIM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED NOTERMINAL FRAGMENT (N-PRODUCT). THIS COVALENY MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY)

OF THE NEURAL TUBE.

-!- DEVELOPMENTAL STAGE: FIRST DETECTABLE AT STAGE 17 DURING THE INITIATION OF LIMB BUD FORMATION. FROM THAT POINT ONWARDS, THE EXPRESSION PATTERN EXACTLY MATCHES THE LOCATION OF THE ZONE OF POLARIZING ACTIVITY (ZPA).

-!- INDUCTION: BY RETINOID ACID.
-!- PIM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURRACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AULOPIOLEO19515.";

Cell 81:445-455(1995).

-I - FUNCTION: BINDS TO THE PATCHED (PTC) RECEPTOR, WHICH FUNCTIONS IN ASSOCIATION WITH SMOOTHENED (SMO), TO ACTIVATE THE TRANSCRIPTION OF TARGET GENES. IN THE ABSENCE OF SHH, PTC REPRESSES THE CONSTITUTIVE SIGNALING ACTIVITY OF SMO. ALSO REGULATES ANOTHER TARGET, THE GLI ONCOGENE. INTERCELLULAR SIGNAL ESSENTIAL FOR A VARLETY OF PATTERNING EVENTS DURING DEVELOPMENT: SIGNAL PRODUCED BY THE NOTOCHORD THAT INDUCES VENTRAL CELL FATE IN THE NEURAL TUBE AND SOMITSS, AND THE POLARIZING SIGNAL FOR PATTERNING OF THE

                                                                                                      PFAM;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ANTERIOR-POSTERIOR AXIS OF THE DEVELOPING LIMB BUD. DISPLAYS BOTH FLOOR PLATE-AND MOTOR NEURON-INDUCTING ACTIVITY. THE THRESHOLD CONCENTRATION OF N-PRODUCT REQUIRED FOR MOTOR NEURON INDUCTION IS 5-FOLD LOWER THAN THAT REQUIRED FOR FLOOR PLATE INDUCTION. SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILLE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORW TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

TISSUE SPECIFICITY: EXPRESSED IN THE NOTOCHORD, AND THE FLOOR PLATE MESSENCHYME, THE HENSEN'S NODE, THE NOTOCHORD, AND THE FLOOR PLATE
                                                                                                                                                                                                                                                                                                   C-PRODUCT HAS NO SIGNALING ACTIVITY.
SIMILARITY: BELONGS TO THE HEDGEHOG FAMILY.
                                                                                    L28099; AAA72428.1; -. PF01079; Hint; 1. PF01085; HH_signal; 1. S; PR00632; SONICHHOG.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOLETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVITY SEPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).

1- DISEASE: DEFECTS IN SHH ARE THE CAUSE OF THE AUTOSOMAL DOMINANT DISCRADER HOLOPROSENCEPHALY TYPE 3 (HPE3). HPE3 IS A GENETICALLY HETEROGENEOUS DISEASE THAT AFFECTS THE MIDLINE DEVELOPMENT OF THE FOREBRAIN AND MIDFACE. HPE IS ASSOCIATED WITH SEVERAL DISTINCT FACIES AND PHENOTYPIC VARIABILITY. IN THE MOST EXTREME CASES, ANOPHTHALMIA OR CYCLOPIA IS EVIDENT ALONG WITH A CONGENITAL ABSENCE OF THE MATURE NOSE. THE LESS SEVERE FORM FEDTURES FACIAL DISCRETARING OF THE MATURE NOSE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SIMILARITY).

SUBCELULIAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

TISSUE SPECIFICITY: EXPRESSED IN FETAL INTESTINE, LIVER, LUNG, AND KIDNEY. NOT EXPRESSED IN ADULT TISSUES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                UPPER LIP AND/OR NOSE, AND ABSENCE OF THE OLFACTORY NERVES OR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SIMILARITY).

SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURPACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

INDUCTION: ACTIVATED BY ACTIVIN, BASIC FIBROBLAST GROWTH FACTOR (BFGF) AND FORK HEAD.

PIM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LEMGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED NOT A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED NOT A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED NOT A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED NOT A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE MODIFICATION APPEARS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SUFFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-FANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY). SIMILARITY: BELONGS TO THE HEDGEROG FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                FUNCTION: ÎNTERCELLULAR SIGNAL ESSENTIĂL FOR A VARIETY OF PAȚTERNING EVENTS DURING DEVLOPMENT AND METAMORPHOSIS. INVOLVED IN LIMB FORMAȚION, PAȚTERNING OF THE CENTRAL NERVOUS SYSTEM AND VENTRAL SOMITE DIFFERENTIATION. INDUCES ECTOPIC CEMENT GLAND FORMATION IN EMBRYOS. BINDS TO THE PAȚCHED (PTC) RECEPTOR, WHICH FUNCTIONS IN ASSOCIATION WITH SMOOTHENED (SMO), TO ACTIVATE THE TRANSCRIPTION OF TARGET GENES. IN THE ABSENCE OF SHH, PTC REPRESSES THE CONSTITUTIVE SIGNALING ACTIVITY OF SMO (BY
